HealthCare Training Service (HCTS)

HealthCare Training Service is a training and professional development company with the vision to provide quality training and education to Health Care Professionals. Our aim is to provide our colleagues with the knowledge, skills and support to fulfil their role in a competent and efficient manner. Our motto: ‘...helping Health Care Professionals to help others’.

HealthCare Training Service has an established Code of Practice as outlined in this curriculum document and in the Company Profile statement. Legislative requirements and quality processes are strictly adhered to as a mandatory requirement for all accredited education providers.

Our postal address is PO Box 426, Albany Creek, Queensland 4035. If you need to contact the HealthCare Training Service team for further information about this program you may utilise the following avenues:

Telephone: 07 3325 0188 (Office Hours)
Fax: 07 3325 0388
Mobile: 0419 675 740
Email: mail@hcts.com.au
Web: www.hcts.com.au

Paediatric Basic & Advanced Life Support Courses

Introduction

As defined by the Australian Resuscitation Council (Guideline 11.1), “Advanced Life Support (ALS) is Basic Life Support (BLS) with the addition of invasive techniques, eg: defibrillation, advanced airway management, intravenous access and drug therapy.”

The Paediatric Basic & Advanced Life Support Course and the Paediatric BLS & ALS Recertification Course provide the learner with a foundation in theoretical knowledge and the application of practical skills within a solid problem-solving framework essential in paediatric advanced resuscitation.

Within our health care environments, life threatening emergencies occur frequently and as such require the timely response of Medical Officers, Registered Nurses and Paramedics. The response of such personnel needs to also be efficient and effective. Through undertaking BLS & ALS training such personnel are able to achieve a sound knowledge base and competence in areas pertinent to advanced resuscitation situations. The essential components covered in the course include: Basic Life Support, Advanced Airway Management, Rhythm Recognition, Defibrillation, ALS drugs, the Management of Life Threatening Arrhythmias (ALS Algorithms), Team member roles in ALS and Post Resuscitation Care.

The Paediatric BLS & ALS course incorporates more than the provision of information, assessment of knowledge base and demonstration of psychomotor skills. It encompasses the role of the team cohesively approaching the resuscitation of the infant or child suffering a life threatening emergency, in a systematic and controlled manner.
This program is a Paediatric Basic & Advanced Life Support Course and is consistent with guidelines produced by the Australian Resuscitation Council (ARC), which is Australia’s national representative on the International Liaison Committee on Resuscitation (ILCOR). This course is also consistent with the Australian College of Critical Care Nurses Limited (ACCCN Ltd) Advanced Life Support Curriculum Guide.

Royal College of Nursing Australia
This program has been accredited by Royal College of Nursing, Australia (RCNA) according to approved criteria. Attendance attracts 6.5 RCNA Continuing Nurse Education (CNE) points as part of RCNA’s Life Long Learning Program (3LP).

Continuing Professional Development (CPD) Points
In addition, attendance at this course provides you with 8 Continuing Professional Development hours as part of your planned learning activities to maintain, improve and broaden your knowledge, expertise and competence. (Nursing and Midwifery Board of Australia, March 2010).

Broad Course Objectives
Following successful completion of this course the learner will be able to:

- Explain the physiological and pathophysiological response to physical compromise culminating in cardio-respiratory failure.
- Demonstrate advanced knowledge and clinical skills in the following:
  - Basic Life Support
  - Basic and Advanced Airway Management
- Demonstrate advanced knowledge and clinical competence in electrocardiographic monitoring including dysrhythmia analysis and management.
- Explain the indications for, correct dose and adverse effects of the primary resuscitation drugs.
- Demonstrate advanced clinical problem-solving skills and clinical competence in the cohesive management of life threatening situations (megacode management) in accordance with the Australian Resuscitation Council (ARC) Guidelines.
- Outline the management of the individual immediately post-resuscitation.
- Discuss management of the family during and post resuscitation events.
- Identify and outline the roles and responsibilities of the Paediatric Advanced Life Support Team and the Paediatric Advanced Life Support certified personnel.

Target Population
- The ALS course is designed for Registered Nurses and Medical Personnel with at least six (6) months experience within the acute care setting.
- Ambulance personnel, Paramedics and Medics with acute field experience are also eligible to attend the program.
Learning Outcomes

On successful completion of the Paediatric Basic & Advanced Life Support Course participants will be able to:

1. Outline priorities in patient assessment and management.
2. Demonstrate paediatric basic life support knowledge and apply paediatric basic life support skills.
3. Employ basic and advanced airway management techniques to secure and maintain a patent airway for an infant and a child.
4. Demonstrate effective ventilation using a bag-valve-mask device.
5. Recognise and institute appropriate management for life threatening arrhythmias.
6. Identify, discuss and implement appropriate use of emergency drug therapy.
7. Discuss the Paediatric ALS algorithm and demonstrate management of cardiac arrest according to the Paediatric ALS algorithm.
8. Demonstrate effective resuscitation team dynamics during cardiac arrest scenarios.
9. Perform decision making skills in a cardiac arrest situation.
10. Identify occupational health and safety concerns.
11. Discuss ethical and legal implications in a cardiac arrest situation.
12. Explain post-resuscitation care of an individual following cardiac arrest.

Prerequisite

- The participant is to hold a current practicing licence as either a Medical Officer, Registered Nurse, Paramedic or Medic.
- It is mandatory for participants attending the Paediatric BLS & ALS course to complete all pre-reading material including review questions prior to attending the course. The course materials will be sent to the participant at least two (2) weeks prior to the date of the course.
- It is mandatory for participants attending the Paediatric BLS & ALS Recertification course to complete all pre-reading material as well as the review questions {timeframe approximately four (4) hours} prior to attending the Paediatric BLS & ALS Recertification Course. The course materials will be sent to the participant at least two (2) weeks prior to the date of the course. Participants attending the Paediatric BLS & ALS Recertification Course must comprehend all the material presented in the course manual and review questions prior to attending the recertification program.
- Enrolment in the Paediatric BLS & ALS Recertification Course is dependent upon recognition of prior learning (RPL) and participants must meet one of the three (3) Recognition Options criteria (see Recognition Options below) to permit attendance in the Paediatric BLS & ALS Recertification Course. If the participant does not meet one of the three Recognition Options criteria stated, the participant will need to enrol in the full day Paediatric Basic & Advanced Life Support Course.
Recognition Options

Participants seeking any of the recognition options stated below should advise the PALS Coordinator at the time of enrolment to obtain the relevant enrolment form and package. Recognition of Prior Learning is required for enrolment in the Paediatric BLS & ALS Recertification Course.

Recognition of Current Competence (RCC)

HealthCare Training Service will provide RCC where a participant has previously successfully completed all requirements of the full day Paediatric Basic & Advanced Life Support Course or Paediatric BLS & ALS Recertification Course within the preceding twelve (12) months and is required to be reassessed to ensure that competence is being maintained. RCC does not include any additional training of paediatric advanced life support competency. If RCC can be demonstrated by the participant, the participant is entitled to enrol in the Paediatric BLS & ALS Recertification Course.

Recognition of Qualifications issued by other accredited PALS Providers

HealthCare Training Service recognises Paediatric Basic & Advanced Life Support Certification and statements of attainment issued by any other accredited Paediatric Advanced Life Support (PALS) Course provider. A participant who holds certification of Paediatric BLS & ALS competency completed by the participant within the preceding twelve (12) months will be entitled to enrol in the Paediatric BLS & ALS Recertification Course.

Recognition of Prior Learning (RPL)

Recognition of prior learning is available to all HealthCare Training Service participants. RPL is a process that recognises the individual’s non-formal and informal learning to determine the extent to which that individual has achieved the required learning outcomes or competency outcomes. RPL does not include additional training of advanced life support competency.

RPL involves the assessment of previously unrecognised skills and knowledge an individual has achieved outside of an accredited Paediatric Advanced Life Support Course. To achieve RPL the individual will need to demonstrate advanced knowledge and clinical competence in advanced life support practices. This may be achieved through the successful completion of an un-accredited paediatric advanced life support course and/or demonstrated extensive experience in a paediatric critical care, paediatric emergency or paediatric trauma unit.

A participant who demonstrates prior learning and competence in advanced life support will be entitled to enrol in the Paediatric BLS & ALS Recertification Course. Participants wishing to apply for RPL should contact the Paediatric BLS & ALS Course Coordinator to discuss their suitability for RPL.
Paediatric Basic & Advanced Life Support Course

Structure

The course is conducted over one (1) day or seven (7) hours, consisting of two (2) essential components:

1. **Theoretical component**
   
   The theoretical component is presented over four (4) hours of direct face-to-face contact involving lecture presentation, group work, group discussion and demonstration.
   
   The theoretical information presented is supported by associated reading material.
   
   There is one (1) theoretical examination with an allocated completion time of twenty-five (25) minutes.
   
   The lecture program will provide a baseline framework upon which knowledge and skills will be developed. Participants will be encouraged to critically examine their individual resuscitation knowledge and skills, as well as reflect upon contextual issues within the function of this complex role.
   
   In addition to the examination paper, the participants’ knowledge will also be assessed through undertaking the competency assessments. This will demonstrate their ability to understand, analyse and apply the theoretical information presented in the course.

2. **Practical component**

   The practical component is presented over two & a half (2 ½) hours and consists of the participants practising their Paediatric Advanced Life Support skills with support and constructive feedback being provided by an experienced facilitator. This will assist the learner to apply theory to practice in a safe and efficient manner.

   Participants will then demonstrate their competency of clinical skills through successful achievement of the following competency assessments:
   
   - Basic Life Support
   - Advanced Airway Management
   - Clinical Scenarios (megacode) Management

   The broad program objectives, content outline, lecture program, examination, competency assessment criteria and associated reading material will set the direction for learning outcomes.

Paediatric BLS & ALS Recertification Course

Structure

The Paediatric Basic & Advanced Life Support Recertification course is conducted over four and a half (4 ½) hours, consisting of two (2) essential components:

A. **Theoretical component**

   The theoretical component consists of pre-reading material and completion of Paediatric BLS & ALS review questions, with an allocated timeframe of completion of three (3) hours. A further two & a half (2 ½) hours of direct face-to-face contact reviewing current guidelines, activity sheets and PALS algorithm. This session will include lecture presentation, group work, group discussion and demonstration.

   The theoretical information presented is supported by associated reading material.

   There is one (1) theoretical examination with an allocated completion time of twenty-five (25) minutes.

   The course material will provide the supporting framework upon which knowledge and skills will be updated, refreshed and consolidated. Participants will be encouraged to critically examine their individual resuscitation knowledge and skills, as well as reflect upon contextual issues within the function of this complex role.

   In addition to the examination paper, the participants' knowledge will also be assessed through undertaking the competency assessments. This will demonstrate their ability to understand, analyse and apply the theoretical information presented in the course.

B. **Practical component**

   The practical component is presented over two (2) hours and consists of the participants practising their Paediatric Advanced Life Support skills with support and constructive feedback being provided by an experienced facilitator. This will assist the learner to apply theory to practice in a safe and efficient manner.

   Participants will then be required demonstrate their competency of clinical skills through successful achievement of the following competency assessments:

   - Basic Life Support
   - Advanced Airway Management
   - Clinical Scenarios (megacode) Management

   The broad program objectives, content outline, lecture program, examination, competency assessment criteria and associated reading material will set the direction for learning outcomes.

Knowledge assessment as part of theoretical examination.                                                                                   |
Teaching & Learning Strategies

- Lecture presentation
- Group discussion
- Case Scenarios
- Reflective Practice

A combination of the various training strategies will be utilised to accommodate the differing learning styles of our participants, the visual learner, the auditory learner, and the kinaesthetic learner, will be catered for. Training pace may also be altered when possible to accommodate varying pace of learning for our adult participants. Both reflective practice and experiential learning will be utilised to enhance learning outcomes.

Assessment

There are four (4) components to the assessments. Learners are required to pass both the theoretical and clinical components of the course in order to achieve a pass for the overall course.

<table>
<thead>
<tr>

<td>Pass Achieved</td>
<td>1, 2, 3, 5, 6, 7, 8, 9, 10, 11, 12</td>
</tr>
</tbody>
</table>
Examination

There will be one (1) written examination to assess the learners understanding of the theoretical information and concepts presented. The examination will take place at the end of the course.

The examination paper will involve rhythm strip analysis and multiple-choice questions.

The examination is of twenty-five (25) minutes duration.

Participants are required to achieve a minimum of 80% for the theoretical examination. Should a participant be unsuccessful in achieving the minimum grade of 80%, s/he will be offered an opportunity to undertake a supplementary examination within two (2) weeks of the completion of the course.

Competency Assessment

The practical competency assessments will be undertaken during the course. This will include oral questioning of the participant and observation of the participant’s ability in each of the three competency areas: Basic Life Support, Basic & Advanced Airway Management and Clinical Scenario (Megacode) Management.

The participants will be assessed against the competency performance criteria, and rated as either achieving or not achieving a competent level of practice. The competency assessment criteria for the practical assessments will be distributed to the participants with the course notes at least two (2) weeks prior to the commencement of the program. During the course the participants will have an experienced clinical facilitator supporting them and providing constructive feedback of performance.

Participants are required to achieve 100% pass for each of the competency assessments. Participants who do not successfully achieve competence for any of the practical assessments will be provided with feedback and consultation with the PALS course coordinator.

The participant will be provided with a second opportunity to successfully achieve competency during the running of the course. If competency is not achieved on the second attempt, the participant will be advised to undertake the entire Paediatric Basic & Advanced Life Support Course again at a later date.
Enrolment and Management of Course Fees

Due to the demand for the courses, course registration will only be confirmed upon receipt of a completed application form and full payment, subject to availability. Fee payment will only be processed if received by accepted payment methods and will be deposited into a trust until such time as the course has been delivered. All payments will be processed promptly and receipts issued as soon as possible.

Payments for programs are required to be paid in full, one week prior to the commencement of the program. Part payments, payment plans and delayed payments are assessed on an individual needs basis by HealthCare Training Service Executive. Non-discriminatory, fair and equitable assessments of payment arrangements will be maintained.

Accepted payment methods are as follows:

• Credit Card – MasterCard or Visa
• Direct Deposit
• Personal cheque
• Bank cheque
• Australia Post Money Order
• Cash

Due to the logistics of arranging presenters and allocating resources, registrations will not be accepted within two (2) weeks of the course date. Numbers of course participants are strictly limited and will not be exceeded at any time.

Cancellation of attendance at any course must be received no later than seven (7) days prior to the course date and a cancellation fee of fifty dollars ($50.00) will apply. Course cancellation cannot be accepted within 7 days of a scheduled course workshop. Upon seven (7) days notification of cancellation of attendance, the registration may be transferred, with no additional cost, to a future HealthCare Training Service course within the next four (4) months, if registration numbers permit. Registration in any course may only be transferred once unless a specific case requires special consideration which will be assessed by the Director of HealthCare Training Service.

In the unlikely event that a course is cancelled, the registration fee will be returned in full.

Maintaining Competence

Participants will be informed of the requirement to successfully pass the theoretical examination and achieve competency status in all three (3) competency assessments on an annual basis. The participants will be advised that the Certificate of Attainment will lapse twelve (12) months after the date of achievement.

Thus, in order to maintain clinical competence attendance at either a Paediatric BLS & ALS Recertification Course or full day Paediatric BLS & ALS Course, as selected by the participant, is required within twelve (12) months of the date of the current Paediatric BLS & ALS Certificate. If the participant fails to attend either a recertification or full day course within the twelve (12) month timeframe, they will no longer be deemed competent in paediatric basic & advanced life support practices.
Location and Frequency of Course

The Paediatric BLS & ALS course will be offered frequently throughout the year, both at a HealthCare Training Service training facility and onsite at various healthcare facilities / hospitals throughout Queensland, Northern Territory and other states as requested.

Exit Criteria

Participants are required to successfully pass all assessment criteria for the course including theoretical and practical competency assessments to be awarded a HealthCare Training Service Certificate of Attainment in Paediatric Basic & Advanced Life Support.

Should a participant be unsuccessful in passing all assessment items for the course (either theoretical or practical), the participant will be awarded a HealthCare Training Service Paediatric Basic & Advanced Life Support Certificate of Attendance only outlining course content and duration.

If a participant is unsuccessful in completing the course an opportunity will be made for reassessment – please see “Appeals Process”.

A participant who undertakes and successfully completes the Paediatric Basic Life Support Competency but fails to successfully complete the Paediatric Advanced Life Support Competency assessments during the course, will be awarded a Paediatric Basic Life Support Certificate of Attainment as well as a Paediatric Advanced Life Support Certificate of Attendance.

Request for Certificate Reprint

Participants requiring a reprint of their Paediatric Basic & Advanced Life Support Certificate may request a reprint by contacting HealthCare Training Service’s office (see contact details page 1). A fee of twenty-five ($25.00) will apply for all Certificate reprints.

Failure to Complete

If a participant commences the course and is unable to complete it, they must make arrangements to undertake all assessment items for the course within two (2) weeks of the course date. Failure for a participant to undertake the course assessments within this time frame will result in the participant having to undertake the entire course again at a future date.

The advanced clinical competency assessments will only be assessed by one of the Paediatric BLS/ALS Course Facilitators or the Paediatric BLS/ALS Course Coordinator. An opportunity to undertake a re-assessment in any of the advanced clinical competencies will be made available to the participant during the course or at a HealthCare Training Service Paediatric BLS & ALS Course scheduled within the following two (2) week timeframe from the course date. The participant will be given the opportunity to decide between reassessment on the day of the course or within the two (2) week timeframe.
A re-sit of the theoretical examination is to be completed within two (2) weeks of the Paediatric BLS & ALS Course date. The theoretical examination will not be re-examined on the day of the course. The participant will be instructed to re-read all of the course material to enhance their understanding of the information presented and to complete a resit examination within two (2) weeks of their course date.

The resit examination can be undertaken at a HealthCare Training Service Paediatric BLS & ALS Course scheduled within the following two (2) week timeframe from the course date and be supervised by the Paediatric BLS & ALS Course Coordinator/Facilitator or alternatively the participant may resit the examination at their place of employment.

If the participant chooses to resit the examination at their place of employment, the examination will need to be supervised by the participant’s reporting officer, such as a Nurse Unit Manager, Clinical Nurse Consultant, Nurse Educator, Clinical Development Coordinator, Nursing Director or equivalent. The appropriate person will be contacted by HealthCare Training Service’s Paediatric BLS & ALS Course Coordinator to seek an agreement from the reporting officer to supervise the resit examination and to provide instruction regarding the conditions in which the resit examination is to be conducted.

The examination supervisor will be forwarded the resit examination paper along with instructions pertaining to the examination conditions. The instructions for the examination supervisor will contain the following:

“Would you please be able to organise a time in the next two weeks for Jane Doe to undertake her resit of the theoretical examination for the Paediatric Basic & Advanced Life Support Course. The details regarding undertaking the examination are on the front page of the paper. Would you then please immediately seal the paper in the envelope provided, sign the envelope seal and return it to the PALS Course Coordinator for marking. The staff member is not to refer to any materials during the examination and no discussion regarding the paper is to be entered into. Under no circumstances is the examination paper to be copied, serious consequences will occur if such an incident arose. If the examination paper is deemed to be interfered with in any way, the resit examination paper will not be accepted and the staff member’s status of fail will remain. Would you also please ensure an appropriate place for the examination to be undertaken where the examinee will not be disturbed during the examination and conditions are suitable to completing an examination of this nature.”

Should a participant be unsuccessful in passing all assessment items for the course (either theoretical or practical), the participant will be awarded a HealthCare Training Service Certificate of Attendance only.

**Appeals Process**

The appeals and reassessment process forms an integral part of the Paediatric Basic & Advanced Life Support Course Curriculum. A fair and impartial appeals process is available to participants of HealthCare Training Service’s Courses. Each appellant has an opportunity to formally present his/her case.
Following notification of failure to meet the identified standards as stated in the course exit criteria, a participant has the right to appeal his/her assessment result. The participant must first discuss the issue with the trainer/assessor. If the participant would like to proceed further with the request after discussions with the trainer/assessor a formal request is to be made in writing to the Course Coordinator outlining the reason(s) for the appeal. HealthCare Training Service's time period for acceptance of appeals is seven (7) days after the participant has been issued with the results of their assessment.

The Paediatric BLS & ALS Course Coordinator will discuss the participant’s results with the participant to provide discussion in the areas of concern. The Course Coordinator will then provide an opportunity for reassessment. If the participant is not satisfied with the subsequent action of the Course Coordinator, then the Course Coordinator will submit a report, along with the participant’s appeal, to HealthCare Training Service’s Executive within fourteen (14) days of the reassessment. The participant will be given a written statement of the appeal outcomes, including the reasons for the decision within fourteen (14) days following receipt of the report.

An appeal on the basis of medical illness or compassionate grounds must be submitted accompanied by appropriate documentation (i.e. medical certificate). An opportunity for reassessment will be arranged at an agreed time. However, a participant who willingly enters into an assessment knowing they are unfit to ably undertake the assessment, on whatever grounds, must be willing to accept the outcome of the assessment as determined by the Course Facilitator/Coordinator.

A participant who appeals on theoretical or competency achievement grounds will be given an opportunity for counselling, remedial assistance and reassessment. If further psychological support is required for a participant, the Course Coordinator will recommend the participant to formal counselling.

**Records Maintenance**

All course participants are entered into a secure database detailing participant’s name, participant’s contact details, course attended, date attended and assessment outcome (e.g. pass or fail). An alert mechanism is in place to issue reminder letters to the participants when it is nearing 12 months since they last completed the Paediatric Basic & Advanced Life Support Course.

On completion of the course, the participant’s details are reviewed with course assessment outcome (e.g. pass or fail) entered into the database. The attendance list signed by the participants is noted with course assessment outcome (e.g. pass or fail) again each participant’s name and the attendance sheet is then scanned and saved onto the computer system.

All hard copies of the assessment items (i.e. competency assessment forms and theoretical examination papers) are filed and stored in a secure storage facility with 24 hour monitoring. All hard copies of the course assessment items, except the attendance sheet, are shredded once three (3) years has passed since the course date.

Confidentiality is a priority and is strictly maintained at all times. All student records are confidential and are only accessed by appropriate HealthCare Training Service staff and the client themselves.
Program Coordinator

Denise Airey
RN, RM, BN, Critical Care Certificate,
Certificate IV Workplace Assessment & Training
Graduate Diploma Adult Education & Training (in progress)
National Heart Foundation Certified CPR Instructor

Access to Paediatric BLS & ALS Course Coordinator/ Facilitators

Participants are invited to contact the Paediatric BLS & ALS Course Coordinator or Course Facilitators with any queries, issues or concerns. The Course Coordinator or Course Facilitators can be contacted by one of the following options:

Telephone: 07 3325 0188 (Office Hours)
Fax: 07 3325 0388
Mobile: 0419 675 740 (Course Coordinator)
Email: mail@hcts.com.au
Postal address PO Box 426, Albany Creek, Queensland 4035.

If the Paediatric BLS & ALS Course Coordinator or one of the Course Facilitators is not immediately available to respond to your initial contact, you are invited to please leave a message regarding your reason for contact with the office staff and the Paediatric BLS & ALS Course Coordinator will attempt to make contact you within forty-eight (48) hours of your initial contact.
Administration Officer

The role of the Administration Officer is to support a high standard of business functions by utilising effective communication skills to enhance team function. The Administration Officer ensures prompt processing of an applicant's course registration, ensuring confirmation letter, taxation receipt and all course materials are forwarded to the applicant in a timely manner (i.e. a minimum of two weeks prior to course commencement).

The Administration Officer collaborates with other staff for effective implementation of training, ensuring appropriate paperwork and course materials are ready for each scheduled training event.

The Administration Officer will at all times adhere to and maintain student enrolments' procedures.

Resources Manager

The Resource Manager’s role is to ensure a range of educational resources and materials are readily available to provide learners with range of approaches to learning.

The Resource Manager conducts a comprehensive assessment of human and material resource requirements to enable the effective and efficient delivery of the Paediatric Advanced Life Support Courses. The Resource Manager ensures all training equipment, e.g. manikin and associated equipment, is cleaned to resuscitation guideline standards and in accordance with the manufacturer’s guidelines.

The Resource Manager maintains safe and effective working order for all training and office equipment, attending to or arranging repairs as required.

Material Resources

Course participants will each receive comprehensive reference material with competency assessment criteria attached at least two (2) weeks prior to the commencement of the program. The participants will have access to, as well as Facilitator support in using, the essential equipment for performance of Paediatric ALS, including:

- Advanced Resuscitation / Defibrillation Manikins (3)
- Monitors / Defibrillators (3)
- ECG Simulators (3)
- Variety of Adjunctive Airway Management equipment
- Minijet medication system including a sample of ALS emergency response drug packaging
- Intraosseous access devices & simulated training equipment (3)

The cleaning, maintenance and storage of all equipment will conform to the manufacturer’s guidelines and ARC Guidelines.
Human Resources

Paediatric Basic & Advanced Life Support Course

Participant numbers for any one course will be limited to a maximum of twelve (12) for the Paediatric Basic & Advanced Life Support Course. Each course will have a Course Co-ordinator and a Course Facilitator to ensure effective delivery of course material, whilst maintaining the safety of participants and themselves. The ratio of participants to trainers will not exceed 6 participants to 1 trainer and be maintained at that ratio (6 : 1) during all practical sessions and competency assessment for the Paediatric Basic & Advanced Life Support Course.

Paediatric Basic & Advanced Life Support Recertification Course

Participant numbers for any one course will be limited to a maximum of ten (10) for the Paediatric Basic & Advanced Life Support Recertification Course. Each course will have a Course Co-ordinator and a Course Facilitator to ensure effective delivery of course material, whilst maintaining the safety of participants and themselves. The ratio of participants to trainers will not exceed 5 participants to 1 trainer and be maintained at that ratio (5 : 1) during all practical sessions and competency assessment for the Paediatric Basic & Advanced Life Support Recertification Course.

Participant Privacy

Information concerning participants, including information submitted at enrolment, will be used by HealthCare Training Service for the purposes of general enrolment administration, communication, reporting, program monitoring and evaluation. The information may be disclosed to an agency authorised to undertake accreditation surveys. HealthCare Training Service does not sell or give away our customer lists.

The provision of this information is necessary for both initial enrolment and re-enrolment in all HealthCare Training Service’s Advanced Life Support courses. Information provided will be held securely and disposed of securely when no longer required.

Course Evaluation

Each Paediatric Basic & Advanced Life Support Course will undergo comprehensive evaluation culminating in the formulation of a quality improvement (QI) report. The evaluation will include formal (written) and informal (verbal) feedback from the course participants as well as course feedback and reflection from the Course Facilitators/Coordinator. The QI report will be forwarded to each of the Paediatric BLS & ALS Course Facilitators, Course Coordinator, HealthCare Training Service’s Executive, Royal Australia College of General Practitioners (RACGP), Australian College of Rural and Remote Medicine (ACRRM) and the Royal College of Nursing Australia as part of the reporting requirements for Continuing Medical Education (CME) and Continuing Nursing Education (CNE) point allocation.
Curriculum Review

The Paediatric Basic & Advanced Life Support Course curriculum, reference material, theoretical examination, competency assessments and evaluations will undergo a comprehensive review annually.

On completion of each program a Quality Improvement Report will be compiled detailing participant formal evaluation and informal feedback, as well as course coordinator / facilitator reflective comment. From each review, areas identified as requiring improvement will be actioned with further follow-up conducted at future courses.
